

BluePass

The Booking.com of the blue economy.

Conservation-first marine tourism — starting with the world's best dive trips, built in East Indonesia.

Marine tourism is **extractive by design.**

1

The reef is the product — and it gets nothing

Every booking platform takes a cut and sends a traveller. None of it funds the ocean that is the entire reason anyone paid.

2

Booking the best trips means trusting a stranger

A \$3,500 liveaboard in remote Indonesia is paid by wiring cash months ahead, sight unseen — even the category leader forwards your money and disclaims refunds.

3

World-class operators are invisible and squeezed

Fragmented, offline, dependent on faceless aggregators — extraordinary crews with no demand engine of their own.

4

Conservation is chronically underfunded

The asset everyone profits from, nobody pays to maintain. The product literally erodes with every season.

The platform that **protects** what it sells.

We align the money with the mission: BluePass only wins if the ocean survives — so protection is built into every booking.

5%

Conservation, verified

5% of every booking funds verified reef work — backed by Green Fins (UNEP), not vague promises.

✓

Trust, built in

Escrow, protection and an AI concierge make it safe to book the remote and the expensive.

★

Demand, built in

A founding cohort of ocean creators drives the bookings — distribution the OTAs pay Google for and can't buy.

Liveaboards are the wedge. The blue economy is the company.

We win the hardest, highest-trust, highest-value transaction first — then extend the same trust, conservation and concierge layer across every bookable marine experience.

One platform. **Three layers.**

BluePass

CONSUMER MARKETPLACE

Where travellers discover, trust and book the best ocean experiences on Earth — cinematic, verified, conservation-first.

Kai

AI CONCIERGE

A WhatsApp concierge that plans, matches, books and remembers — high-touch trip planning, finally scalable.

OpenKai

B2B INFRASTRUCTURE

The booking, trust & payments rails beneath it all — the operating system for the entire blue economy.

The window is **open now**.

- **Impact travel is now the mainstream.** 84% of travellers say sustainable travel matters; 73% want their money to reach the local community; 71% want to leave places better than they found them (Booking.com). Demand is here — supply isn't organised.
- **AI makes concierge planning scalable.** WhatsApp + LLMs turn a high-touch travel agent into software that serves everyone.
- **Indonesia is backing the blue economy.** The government is prioritising sustainable marine tourism, conservation finance and marine-park development — and BluePass is the aligned private-sector partner on the ground.
- **The supply is still offline.** The world's best operators run on WhatsApp and wire transfers — an access window only an embedded insider can move through first.

The largest sector of the **ocean economy**.

TAM

\$2.9T

Coastal & marine tourism — the biggest part of the blue economy, growing ~6% a year toward \$5T by 2030.

SAM

\$100B+

Bookable marine experiences & stays — dive, snorkel, wildlife, sailing, eco-lodges (excl. cruise).

SOM

\$5–6B

Global dive & liveaboard travel — our beachhead, starting in East Indonesia.

Sources: Grand View Research, Market.us, OECD/Frontiers (marine & coastal tourism ≈ largest ocean-economy sector). SAM is a BluePass estimate of the bookable experiences layer — replace with internal model.

What we earn on every booking.

One liveaboard booking · \$3,500

Our 20% commission then splits three ways:

We charge a **20% commission**. After the reef and payments, we keep **~12% of every booking** — about \$420 on a \$3,500 trip.

Average booking value by category · illustrative

Sailing / private charter	\$6,000
Dive liveaboard	\$3,500
Dive resort week	\$1,400
Eco-marine stay	\$900
Snorkel / day dive	\$120
Marine wildlife day	\$90

We start where AOV is highest (liveaboards). As we add high-volume categories, blended AOV falls — but volume more than compensates.

The five-year model.

YEAR	WHERE WE OPEN	BOOKINGS	AVG VALUE	GROSS BOOKINGS	NET REVENUE	TO THE REEF
Y1	East Indonesia · liveaboards	~670	\$3,000	\$2M	\$0.2M	\$0.1M
Y2	Indonesia-wide · + dive resorts	~6,000	\$2,000	\$12M	\$1.4M	\$0.6M
Y3	Coral Triangle · + snorkel & wildlife	~37,500	\$1,200	\$45M	\$5.4M	\$2.3M
Y4	SE Asia · + sailing & eco-stays	~133,000	\$900	\$120M	\$14.4M	\$6.0M
Y5	Global · full blue economy	~430,000	\$700	\$300M	\$36M	\$15M

- The market grows ~6% a year — coastal & marine tourism rises from ~\$2.9T toward ~\$3.7T by Y5. We grow **2.5–6× a year**, taking share, not waiting for the tide.

~\$24M

cumulative to conservation, Y1–Y5

And this is marine only. Beyond Y5, OpenKai applies the same rails to the broader adventure-tourism vertical — a market several times larger (see roadmap).

Illustrative scenario at a 20% commission (12% net). Figures show the shape of the model, not a forecast — replace with the internal model before circulation.

Why we win — honestly.

The giants can't be bothered with offline, low-frequency marine supply. The specialist incumbents (PADI Travel et al.) occupy it as thin agency layers. We win on what they can't or won't copy.

	BluePass	PADI Travel	Booking / Expedia	Book direct
Holds money + booking protection	●	—	●	—
Funds conservation (not just badges it)	●	—	—	—
Creator-driven distribution + equity	●	—	—	—
AI concierge (plans + remembers)	●	partial	partial	—
Embedded marine-specialist supply	●	●	—	●
Operator / creator ownership	●	—	—	—

The un-copyable part: most top ocean creators refuse to work with extractive OTAs — but the early signal is they'll **proudly** back a conservation-first, creator-owned model. That distribution can't be bought.

Why it compounds — and why **they can't leave.**

- **Own the trust & money layer.** Escrow + protection make booking direct — wiring cash to a stranger abroad — irrational.
- **Scarce, government-backed supply.** Prime permits and peak dates gated through BluePass, with Indonesian state support — you can't bypass a gate you don't control.
- **Distribution OTAs can't replicate.** Top creators refuse extractive platforms but proudly back this one — a demand channel competitors literally cannot buy.
- **Compounding personal value.** An auto dive logbook and Conservation Passport that get richer every trip and can't leave with you.
- **Aligned ownership.** Creators and operators earn — and hold equity — only on-platform.
- **Conservation credibility + community returns.** Green Fins (UNEP), named partners, and money flowing back to communities and reefs — a loop incumbents can't fake.

What we own.

■ Proprietary technology

OPENKAI · KAI

The booking, trust & payments rails for marine tourism, and the Kai concierge — proprietary workflows and a conversational booking engine trained on real trips.

■ Data network effect

DIVE LOGS · CONSERVATION PASSPORT

An accumulating, proprietary dataset — verified dives, impact records, operator quality and reviews — that compounds with every booking and can't be replicated late.

■ Exclusive relationships

SUPPLY · PERMITS · GREEN FINS · CREATORS

Embedded operator agreements, prime-date / permit access, Green Fins (UNEP) partnership, and a creator network locked in by equity — contractual moats, not features.

■ Brand

BLUEPASS · OPENKAI · KAI

The conservation-first category brand and trademarks across the consumer, concierge and infrastructure layers — the trust mark of the blue economy.

IP strategy: trademarks across all three layers; trade-secret protection on the trust/verification and matching systems; patent exploration on conservation-verification and booking-protection methods.

A self-reinforcing flywheel.

- **Creators' content** brings inspired travellers — demand the OTAs pay Google for.
- **Travellers book** trusted, conservation-first trips.
- **Bookings fund** operators, local communities and the reef.
- **Healthier oceans + thriving communities** make better stories and supply.
- ...which draws **more creators and travellers** — the loop tightens every cycle.

Three sign-up motions

Operators claim their profile.

Creators join the founding cohort — content, equity, free trips.

Dive shops & groups refer & earn.

Why OTAs can't run this loop: it only works when it isn't extractive. Content drives the bookings, more money flows back to communities and reefs, and better places make better stories — a compounding cycle an ad-funded middleman structurally cannot copy.

Today's middlemen **extract.**

The current model takes a toll on the way in — and sends none of it back to the people, places or ocean that make the trip worth taking.

20–30%

Taken from operators

Viator (~25%) and GetYourGuide (up to 30%+) commission on tours & activities — margin that never reaches the crew running the trip.

\$20B+

Spent re-buying attention

The largest OTAs spent \$20B+ on sales & marketing in 2025 — much of it straight back to Google. None reaches operators, communities or the reef.

33%+

And tightening

OTAs now control a third of tour & activity bookings, up from 24% in 2019 — a growing toll on a \$271B experiences market.

The toll flows to Google and shareholders. BluePass routes the same economics back into the network that actually creates the booking.

Sources: Arival, Bokun, Zau, Samba (commission rates); PhocusWire / Skift (2024–25 OTA sales & marketing spend, \$17.8B → \$20B+).

The referral mesh — everyone earns on the way through.

Not a one-way funnel. A network where every participant both refers and earns a commission on the trips they send — so distribution compounds instead of being re-bought each cycle.

A referral commission flows along every edge.

- **Operator lock-in.** The network becomes their best sales channel — leaving BluePass means leaving the demand.
- **Customers stay happy.** Friends bring friends onto the boat, and everyone shares the upside of the trip they create.
- **Structural CAC.** Demand isn't re-bought from Google each cycle — the mesh refers itself.

OTAs take 20–30% and keep it. The mesh shares it across the people who actually drive the booking.

An experience worth staying for.

Nat Geo meets Apple — cinematic, trustworthy, premium. The product itself is a moat.

3D boat walkthroughs

Walk the vessel, see the actual cabin, pick your bunk against live availability — and book in that flow.

Kai concierge

Plans, matches and books over WhatsApp — and remembers your certs, trips, buddies and budget.

Dive log + Passport

Auto-logged dives from your smartwatch, plus a verified record of the reef impact you've funded.

Already in the water.

24

Operators partnered

24 of East Indonesia's finest operators signed across **Komodo & Raja Ampat** — the most sought-after dive supply on Earth, locked in.

10M+

Creator reach

A founding cohort with **tens of millions** of combined audience — specific to marine & adventure travel, not generic reach.

5

Conservation partners

Green Fins (UNEP), Ocean Gardener, Coral Triangle Center, Misool Foundation & Plastic Bank.

— FOUNDING CREATOR COHORT

Operator **and** adventure-tourism scaler.

AC

Anthony Cargill

FOUNDER & CEO

Nearly a decade embedded in East Indonesian marine operations — Raja Ampat, Komodo, the Banda Sea. The operator and conservation relationships incumbents can't buy, and the local trust the category runs on.

SM

Sean Mulhern

CO-FOUNDER

Founder of **One Life Adventures**, a content- and community-driven adventure-travel brand built at scale. Brings the playbook for turning audience into bookings — and the engine behind OpenKai's expansion into adventure tourism.

Complementary founders — marine supply & trust meets adventure-tourism distribution & scale. Add key hires and advisors with bios/photos before circulating; confirm Sean's title and bio wording.

From beachhead to blue-economy infrastructure.

Phase 1 · now BEACHHEAD

East Indonesia dive. 24 operators live across Komodo & Raja Ampat; founding creator cohort; the hardest, highest-value transaction won first.

Phase 2 BLUE ECONOMY

Every marine experience. Resorts, snorkel, wildlife, sailing, eco-stays — Indonesia → Coral Triangle → global. The Booking.com of the blue economy.

Phase 3 OPENKAI

The rails the industry runs on. OpenKai opens the booking, trust & payments infrastructure to the whole sector — even competitors.

Phase 4 ADVENTURE TOURISM

Beyond the ocean. OpenKai extends the same rails into the broader adventure-tourism vertical — a market several times larger, with Sean's One Life Adventures playbook leading the way.

Every place left better for the travellers having been there.

The engine becomes **the platform.**

We didn't start with dive travel because it's big. We started because it's the **hardest transaction in travel** — and the rails that solve it generalize everywhere.

Trust, solved the hard way
\$3,500 to a stranger, offline

→ **If escrow works here, it works for any operator**

A channel OTAs can't get
creators who refuse extractive platforms

→ **Portable demand for every adventure category**

Kai already plans the trip
a concierge travellers know

→ **Retrains on trek, safari & surf in days, not years**

Trekking
& expeditions

Wildlife
& safari

Climbing
& mountaineering

Surf
& watersports

Ski
& alpine

Cultural
& eco-adventure

The operating system for the **experiences economy**.

Every experience operator on Earth needs the same five things BluePass already built. OpenKai opens them as infrastructure — the rails the industry runs on.

Trust & escrow

Money held, released on delivery — the layer no OTA owns.

Kai

AI concierge that plans, matches and books any experience.

Creator demand

A distribution channel competitors structurally can't buy.

Conservation

Verified impact, built into the rails — not bolted on.

Payments

Cross-border settlement, operator-ready out of the box.

A proven playbook. Stripe began with one API. Shopify with one store. Toast with one restaurant. Category-defining infrastructure always starts as a vertical wedge — OpenKai starts with the hardest trip in travel, then opens the rails to everyone.

From a marine wedge to an infrastructure business.

Adventure tourism is a ~\$700B market growing double digits toward ~\$1.5T+. Layered on coastal & marine tourism (~\$2.9T), OpenKai addresses a multi-trillion experiences market — as the rails beneath it.

INFRASTRUCTURE-SCALE OUTCOME

\$20–40B

How it traces: \$10B+ GBV × ~4% blended take + per-operator SaaS ≈ \$400M+ revenue; at infrastructure multiples (~10–20×) that's a **\$20–40B** business.

Illustrative gross-bookings extrapolation — shape, not a forecast. Adventure-tourism sizing: Grand View, Fortune Business Insights, IMARC (2025). Replace with internal model.

They can't build this — so they'll buy it.

Booking and Expedia can't meaningfully pivot here: as public companies, routing 5% to conservation and rebuilding around trust would dent margins and investor sentiment. So they acquire the category instead.

WHY BLUEPASS IS THE ACQUISITION

- ✓ **A trust-based vertical they can't capture.** A stranger's boat in remote Indonesia needs trust a generic OTA brand can't manufacture.
- ✓ **Creator + community goodwill they can't buy.** The channel that drives the bookings refuses to work with extractive platforms.
- ✓ **Margins that stay profitable.** Even with 5% to the reef, the take-rate still makes money.
- ✓ **An impact story they can't tell on their own.** Conservation built in, not bolted on — authentic and acquirable.

Booking Holdings

Expedia

Airbnb

Tripadvisor / Viator

ILLUSTRATIVE OUTCOME

\$180–360M

Y5 net revenue ~\$36M × ~5–10× marketplace multiple — **plus a premium for the ~\$24M+ routed to conservation**, a rare ESG and brand asset, and the OpenKai layer above it.

THE BIGGER PRIZE · OPENKAI

\$20–40B at infrastructure scale

Near-term, BluePass is acquired. Long-term, OpenKai becomes the rails for the experiences economy — an IPO or strategic outcome an order of magnitude larger.

Acquirers, multiples and ranges are directional context, not a valuation — verify before circulation.

What your investment **does.**

Two returns: the upside of backing the category early — and the conservation impact your capital sets in motion.

— FINANCIAL · ILLUSTRATIVE

A **\$25K** check on the **\$4M** SAFE cap $\approx$ **~0.6%** at conversion (pre-dilution).

Marine acquisition **\$180–360M**

~\$1.1–2.2M

OpenKai infrastructure **\$20–40B**

infrastructure-scale

Pre-dilution; later rounds reduce ownership. Illustrative, not a forecast or guarantee.

— IMPACT

~\$24M

routed to verified reef conservation by Y5 — Green Fins (UNEP), Ocean Gardener, Misool & more — plus income flowing to East Indonesian communities on every booking.

You fund the rails that send 5% of every trip back to the ocean.

Illustrative scenarios — not a forecast, offer, or guarantee of returns. Figures are pre-dilution; conservation totals are projected platform-wide, not individual entitlements. Not financial advice.

Join the founding round.

Raising a **\$250K** angel round on a **SAFE** at a **\$4M cap** — to build the trust layer, ignite the creator cohort, and onboard the founding operators.

Product

Escrow & booking protection, Kai concierge, 3D boat experience.

Supply

Operator onboarding and exclusive permit / prime-date access.

Demand

Founding creator cohort and conservation-led launch.

invest@bluepass.co · bluepass.co
